Subject: Re: FW: letter to Steve Wells

Dan and Kristen,

Here was an article last month from EE, but it speaks to communication between wells. I don't know what you hear from your companies, but watching for the hits is important, also I presume they want to protect the frac investment and not have it "dump" into another wellbore. I heard there may be a working committee with New Mexico Division of Minerals to look into field practices.

Let me know what you think,
steve
